Water Quality Kit

Test the health of your local creek water with the LaMotte Water Quality testing kit. The easy to use kit includes simple, non-hazardous methods for testing eight water quality parameters: Coliform bacteria, Dissolved Oxygen, BOD, Nitrate, pH, Phosphate, Temperature and Turbidity.

Macroinvertebrate/Aquatic Insect Kit

What is a macroinvertebrate? Which ones live in your local creek? Using kick nets, dip nets, trays and identification sheets you'll discover the bugs that call the creek their home. Students complete an aquatic insect count and determine the health of the creek based on the types of insects they find.

Creek Cleanup Kit

Want to help protect a creek near your home or school? Plan a creek clean up and check out this helpful kit that includes all you need to clean up your local creek. Trash-pickers, gloves, trash bags and a "Trashy Treasure Hunt" activity are available to help make your cleanup outing a success.

Storm Drain Marking Kit

Did you know that storm drains lead straight to local creeks and ditches? Help curb stormwater pollution by storm drain marking! Youth up to age 18 spray paint the message "Dispose No Waste, Drains to Creek" with a stencil and adults apply a durable marker with the same message on storm drains in their community to raise awareness about water pollution.

Water History Trunk

Explore Colorado's water history with the Water History Trunk. Complete with artifacts, historical documents, photographs, maps, state water resource information and classroom activities, the Water History Trunk will get you and your students well on your way to being Colorado Water History experts.
